

KEY BENEFITS

- ✓ **Detect what others miss**
We assess 10 threat signals against the industry standard of 4.
- ✓ **Protect sensitive data**
Stops data leaving for unsafe apps and services.
- ✓ **Unobtrusive and self-resolving**
Quiet for users, low effort for IT.

-  **ISO 27001**
Certified
-  **EU native**
Data stays in the EU
-  **GDPR**
Compliant by design

Advanced threat detection and response for mobile endpoints

EDR and DLP for iOS and Android.
Corrata sees every threat and stops it instantly on-device.

23%

of the threats Corrata detects are missed by other tools.

Running on the device, not in the cloud, gives Corrata network-level visibility others cannot see.

Protect against mobile threats

In today's workplace, **mobile devices are primary work tools**. Employees use them to access email, applications and corporate data from anywhere, which makes them a prime target for attackers.

Most mobile security solutions send device traffic to the cloud for inspection. That approach introduces delay, raises privacy concerns, and depends on a constant connection to a remote service. Threats can act in the gap between detection and response.

Corrata takes a different approach. **Inspection and protection happen on the device itself**. Traffic is analysed locally, in real time, without routing it through a cloud proxy or a VPN tunnel. Threats are detected and stopped at the point they occur, not after the data has left the device. This keeps protection fast, keeps employee data private, and means devices stay protected even when connectivity is poor.

Use cases

The threat, and the capability that stops it.

◆ Mobile phishing protection

Notifications, SMS, QR codes and social media harvest credentials, bypass MFA and steal session cookies.

- » On-device inspection and real-time response block it across every channel, not just email.

◆ Data loss prevention

Sensitive data leaks to unsanctioned apps, SaaS and AI assistants you do not control.

- » Automated DLP intervenes before data is lost.

◆ Spyware detection

Nation-state and commercial spyware such as Pegasus exfiltrates data and surveils users.

- » On-device inspection and real-time response catch even the most evasive threats.

◆ Device trust

Insecure devices, corporate or BYOD, reach enterprise apps and put data at risk.

- » Compliance and conditional access let only secure devices through.

◆ Vulnerability management

Out-of-date OS versions and weak configurations carry real risk.

- » Continuous posture monitoring flags issues and prompts users to fix them.

◆ Adversary-in-the-Middle (AiTM) protection

Cellular and Wi-Fi networks are open to interception.

- » On-device inspection protects communications wherever the device connects.

BUILT IN THROUGHOUT

Full visibility and forensics · Privacy by design · Simple deployment, low overhead

On-device inspection

Threats stopped on the device, not in the cloud.

80%

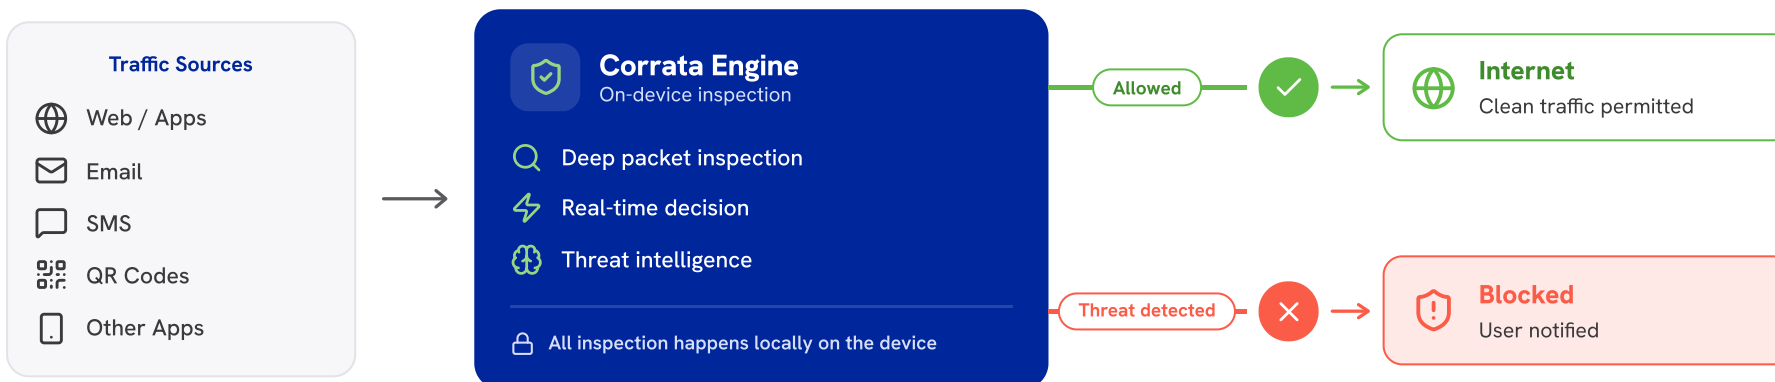

of organisations have experienced mobile phishing attempts targeting their employees.

Verizon, 2025.

Notifications, SMS, QR codes and social media harvest credentials, bypass MFA and steal session cookies. Here is how Corrata stops it on the device.

On-Device Inspection

Protection at the source. No cloud proxy. No VPN.

About Corrata

Corrata delivers mobile endpoint security. Its **on-device architecture** detects advanced threats, prevents data loss, and protects employees' privacy, all without the delay or exposure of cloud-based inspection. Organisations across a range of industries rely on Corrata for full

visibility of mobile risk, instant blocking of malicious content, and a security solution that is simple to deploy and easy to live with.

Corrata is headquartered in **Dublin, Ireland**, and is ISO 27001 certified, EU native and GDPR compliant.

ON THE ROADMAP

As the attack landscape evolves, Corrata is investing in a **domain-specific Small Language Model** for privacy-compliant mobile threat detection, keeping advanced analysis on the device.
